

RESCUE

HOW TO REDUCE OR PREVENT RADIATION DERMATITIS

Do: Use RADIATION RESCUE

When used from day one of radiation treatment, Radiation Rescue helps to minimize or eliminate radiation dermatitis. Radiation Rescue is a medical grade water-based hydrogel that will improve patient experience with radiation treatment. Use even if there is no immediate sign of skin damage.

Radiation Rescue cools, soothes and draws heat out of the skin to help stop the progression of radiation dermatitis. Radiation Rescue provides immediate pain relief by covering exposed nerve endings.

Radiation Rescue is most effective when applied in a thick layer and allowed to remain in contact with the skin no less than 15–30 minutes. Do not rub Radiation Rescue into the skin during application.

Re-apply as often as necessary for 15–30 minutes. If patient experiences dryness of skin, apply a water-based lotion in conjunction with Radiation Rescue after the 15–30 minutes.

NURSE COMMENTS:

- Rather impressive - no breakdown.
- 90% of my patients felt it really helped.
- The skin was scaly and nasty and after using the Radiation Rescue it smoothed it right out and gave my patient relief.
- I recommend Radiation Rescue to all my patients.

Don't:

Don't use aloe or petrolatum-based products, ointments, and creams. These and many home remedies for radiation dermatitis will not cool the skin, but may trap the heat in the skin, allowing the burn to continue and progress deeper in the tissue.
